INTRODUCTORY NOTES TO THE PRICE LIST

Price list 2023

Edition: April 2026

All prices included in this price list are recommended as maximum final selling price on the markets of validity.

All prices included in this price list are in EURO currency and EX-WORKS (*City Disegn* Metalco warehouses).

Please note: payments in other currencies have to be authorized and agreed in advanced by City Design Metalco.

Based on material and all product type, some special options and reparation and maintenance options are available upon request and with surcharge.

For the list, please see the tables at page II, III and IV.

For shelters, please see the "IMPORTANT INFO ON SHELTERS, COVERS AND SHADING STRUCTURES" at page V.

Due to packing and transport needs, Metalco products are provided in simple components to assemble, except for those articles which can be delivered already fully assembled, thanks to their shape, weight and size. For the available packaging options, please see the annex "PACKAGING OPTIONS" at page VI.

GLOSSARY: abbreviations, terminology and symbols

PPC	Polyester Powder Coating
ALU	Aluminum
HPC	High Performance Concrete
HPL	High Pressure Laminate
WPC	Wood Polymer Composite
Necessary Complement	Element necessary to complete the product. All elements indicated as "necessary complement" in the price list have to be required in the LPO by the client. ATTENTION: Metalco sales dept. will not include them in the orders automatically.
Optional Sizes	Optional accessory upon request All sizes are expressed in mm
	Flammable material Please verify with your forwarder safety measures for transportation.
	Articles for which, upon request and with surcharge, CATAPHORESIS treatment is available, as additional treatment, on small of the product or accessories of the product (code 1980042)
	Articles for which, upon request and with surcharge, CATAPHORESIS treatment is available, as additional treatment, on the majority of the product/ on full product (code 1980042)

SPECIAL OPTIONS AND REPARATION & MAINTENANCE

POWDER COATED: STEEL - ALUMINUM - STAINLESS STEEL	
SPECIAL OPTIONS (extras to add on price list price)	
Code 1980016 - extra for RAL color not listed in our standard color table (net price)	308 €
Code 1980069 - extra for glossy smooth finish colors	10%
Code 1980068 - extra for matte smooth finish colors	10%
Code 1980062 - extra for anti-graffiti treatment	5%
Code 1980042 - extra for cataphoresis treatment (if on small parts/accessories)	8%
Code 1980042 - extra for cataphoresis treatment (if on full product or major part of it)	15%
Code 1980059 - extra for primer treatment (on shelters and big carpentries)	2%
Code 1980059 - extra for primer treatment (on benches, litter bins, planters, tree grills, fountains, displays and eventual other elements different from shelters)	5%
REPARATION & MAINTENANCE	
Code 9000230 - fast dry retouch spray (net price)	21 € 
Code 9000231 - graffiti cleaner, for items in p.c.c. steel with anti-graffiti treatment (net price)	22 € 

STAINLESS STEEL	
<i>Our standard stainless steel is AISI 304 or 304L. For AISI 316, verification of feasibility and price surcharge is necessary.</i>	
OPTIONAL TREATMENTS (extras to add on price list price)	
Code 1980063 - extra for electropolishing treatment (if not included)	6%

CORTEN STEEL	
SPECIAL OPTIONS (extras to add on price list price)	
Code 1980055 - extra for anti-washout treatment	8%
REPARATION & MAINTENANCE	
Code 9000237 - anti-washout treatment - 1lt can (net price)	37 € 
Code 9000236 - anti-washout treatment - 5lt can (net price)	146 € 

WOOD	
Hardwood is always supplied with impregnation. On request it can also be supplied with semi-transparent or raw impregnation, without any extra charge. Thermo-treated pine is always supplied unimpregnated. Upon request, it can also be supplied impregnated, both pigmented and semi-transparent, with a surcharge. On request and with a surcharge it is possible to supply FSC wood with delivery times that can also increase significantly.	
SPECIAL OPTIONS (extras to add on price list price)	
Cod. 1980073 - extra for impregnation thermo treated pigmented pine	3%
Cod. 1980074 - extra for impregnation semi-transparent thermo-treated pine	3%
Code 1980160 - extra on price list price for certified hardwood with FSC 100% origin	20%
REPARATION & MAINTENANCE	
Code 9000221 - pigmented treatment for hardwood/pine wood - 1lt can (net price)	14 €
Code 9000222 - pigmented treatment for hardwood/pine wood - 5lt can (net price)	68 €
Code 9000223 - pigmented treatment for hardwood/pine wood - 10lt can (net price)	134 €
Code 9000224 - anti-grey cleaner for hardwood/pine wood - 1lt can (net price)	11 € 
Code 9000225 - anti-grey cleaner for hardwood/pine wood - 10lt can (net price)	93 € 

HPC CONCRETE		
SPECIAL OPTIONS (extras to add on price list price)		
Code 1980058 - extra for anti-graffiti treatment on HPC		8%
REPARATION & MAINTENANCE		
Code 8954000 - repair kit for HPC white (net price)	30 €	
Code 8954001 - repair kit for HPC grey (net price)	30 €	
Code 8954002 - repair kit for HPC dark grey (net price)	30 €	

PLANTERS (assembled)		
SPECIAL OPTIONS (extras to add on price list price)		
Code 1980041 - extra for layer of tar treatment		5%
Cod. 1980043 - extra on list price for insulation		8%

SHELTERS		
SPECIAL OPTIONS		
Code 1980075 - certification of structural element materials		

ASSEMBLY		
EXTRA COST FOR ASSEMBLED PRODUCTS (NET PRICE)		
extra cost for steel bench		30 €
extra cost for wooden bench		38 €
extra cost for steel bench with backrest		41 €
extra cost for wooden bench with backrest		49 €
extra cost for WAVE table		49 €
extra cost for tables		41 €
extra cost for displays		52 €

CUSTOMIZATIONS FOR RECYCLING LITTER BINS

Customizations with writings and/or logos, are available **ONLY on SMOOTH POWDER COATING FINISH (both glossy or matte)** or on **ANTIGRAFFITI** (when possible, with a 5% surcharge to add to the price list price). See Special Options and Maintenance page II.

	TYPE	ADVANTAGE	DISADVANTAGE
1	screen printing/ pad printing	long lasting, resistant to vandalism	fix costs
2	adhesive application	low cost, small quantities	limited resistance

BUS SHELTERS

IMPORTANT INFO ON SHELTERS, COVERS AND SHADING STRUCTURES

LOADS

The table expressing the maximum loads (wind/snow) that our standard covers (as priced in this price list) can support is available at this link: <https://www.citydesign.it/shelter-table/> P.N. Always check the link before quoting your shelters as eventual updates will be reported directly at this link. **DO NOT use previously downloaded versions** without checking for updates.*

The loads have been identified based on the Italian Rules for Constructions, proclaimed in 2018 (shortly named NTC 2018) in actuation of Eurocode. Please note that each installation site has its own specific loads requirement and its proper regulations. It is the client's responsibility to verify with a qualified engineer the suitability of our covers for a specific installation site and the compliance with the local regulations applicable. In case the loads of our standard covers expressed in the chart visible at the following link <https://www.citydesign.it/shelter-table/> are not sufficient for the requirements of the specific installation site the standard covers must not be installed. City Design remains available to evaluate feasibility and pricing of a reinforced shelter to comply with the requirements of the specific site.

Attention: City Design, registered trademark of METALCO Srl, will not be held liable in case the above mentioned verification will not be conducted and/or in case the client will proceed to place covers non compatible with the requirements of the specific installation site.

FOUNDATIONS

Each shelter requires proper foundations designed and calculated for the conditions of the specific installation site and in compliance with the local regulations.

It is the client's responsibility to verify with a qualified engineer the correct foundations necessary for each shelter to install.

Attention: Metalco Srl will not be held liable in case the above mentioned verification will not be conducted and/or in case the client will not predispose foundations suitable for the requirements of the specific installation site

ANNEX

PACKAGING OPTIONS

City Design, brand of Metalco Srl, packaging materials are 100% recyclable.

Special packaging options are subject to an extra and have to be required in your LPO.

The choice of the packaging option most suitable for each transport condition, is the client's responsibility. **In case of special packaging needs due to airfreight, please inform Metalco Srl to verify feasibility and costs.**

In general, as standard, our products are positioned on pallets, held by straps and packed with extensible film and, if necessary, with cardboard strips to protect irregular edges or with a layer of corrugated cardboard. Please note that some products may not require/allow standard packaging, eg:

- Small orders/small items may not be placed on pallets and may be packed in a bundle or similar
- Bigger items may require a different solution for the transportation (shelters, packaging due to the size)

As alternative, with an extra , it is possible to choose between:

Code 1980048 - extra on the total amount of the order for reinforced packaging

3%

Option upon request. Please note that this option is not possible for all products.

In addition to standard packaging, it includes:

- Extra extensible film
- Cardboard corners and or/ extra corrugated cardboard
- Semi-soft corners and/or stripes

PACKAGING OPTIONS

Code 9001032 - extra on the total amount of the order for packaging in open cages (up to 1000 kg) **upon request**

Option upon request. Please note that this option is not possible for all products and price is valid only up to 1000kg. For products exceeding this weight, feasibility and price have to be verified. Product is packed as std and positioned in a wooden cage

Code 9001021 - extra for packaging in closed wooden boxes (up to 1000 kg)

upon request

Option upon request. For products exceeding this weight, feasibility and price have to be verified. Product is packed as std and positioned in a “closed” wooden cage.

For some products packaging in wooden crate may require a special option: prices/codes is indicated in the product section.

COLORAZIONI-MATERIALI
COLORS-MATERIALS
COULEURS-MATIÈRES
COLORES-MATERIALES

FINITURA RAGGRINZANTE - WRINKLED FINISH - FINITION TEXTURÉE - ACABADO GOFRADO

ACCIAIO VERNICIATO / ALLUMINIO VERNICIATO

Per ogni prodotto e componente in acciaio scegliamo la materia prima e i trattamenti più idonei in base al nostro ciclo produttivo e alle necessità di ciascun design.

Tra i nostri trattamenti per l'acciaio ci sono la zincatura a caldo e a freddo, la zincatura Sendzimir, la cataforesi e la verniciatura primer.

Per i nostri prodotti e componenti in alluminio utilizziamo alluminio in lastra o in estrusione o in fusione. Successivamente verniciamo l'acciaio, l'acciaio Inox e l'alluminio con polvere poliestere, in conformità alla norma EN ISO 12944-2.

Mettiamo a disposizione un'ampia gamma di colorazioni RAL standard con finitura raggrinzante con diversi livelli di goffatura, mentre solo dove è prevista la personalizzazione tramite adesivi, tampografia o serigrafia per ragioni tecniche la finitura è liscia opaca o lucida secondo fattibilità tecnica.

Proponiamo anche 2 colorazioni esclusive, dalla peculiare texture raggrinzata, il grigio micaceo e il colore corten.

A richiesta sono disponibili diversi trattamenti e personalizzazioni tra cui verniciatura con colori fuori standard, e/o con finiture liscio opaco e liscio lucido, e/o verniciatura antigraffiti.

POWDER COATED STEEL / POWDER COATED ALUMINUM

For every steel product and component, we choose the most suitable raw materials and treatments based on our production cycle and the needs of each design.

Our steel treatments include hot-dip galvanization, cold galvanizing, Sendzimir galvanization, cathaphoresis and primer coating.

For our aluminum products and components, we use aluminum in sheet or in extrusion or in casting. Then we powder coat steel, stainless steel, and aluminum with polyester powder, in accordance with EN ISO 12944-2.

We offer a wide range of standard RAL colors with wrinkled finish with different levels of texture. Only when customization through stickers, pad printing or serigraphy is provided, for technical reasons, their finish will be smooth matte or smooth glossy, depending on the technical feasibility.

We also offer two exclusive colours, with a peculiar wrinkled texture: corten colour and grey "micaceo".

Upon request, different treatments and customizations are available, such as powder coating with non-standard RAL colors, and/or with smooth matte and smooth glossy finishes, and/or anti-graffiti treatment.

ACIER THERMOLAQUÉ / ALUMINIUM THERMOLAQUÉ

Pour chaque produit et composant en acier, nous choisissons la matière première et les traitements les plus appropriés en fonction de notre cycle de production et des besoins de chaque conception.

Nos traitements pour l'acier comprennent la galvanisation à chaud et à froid, la galvanisation Sendzimir, la cathaphorèse et le thermolaquage avec primer. Pour nos produits et composants en aluminium, nous utilisons des tôles d'aluminium ou de l'aluminium extrudé ou moulé.

Nous thermolaquons ensuite l'acier, l'acier inoxydable et l'aluminium avec de la poudre de polyester conformément à la norme EN ISO 12944-2. Nous proposons une large gamme de couleurs RAL standard avec une finition structurée avec différents niveaux de gaufrage, tandis que la finition est lisse, mate ou brillante selon la faisabilité technique, uniquement lorsque la personnalisation au moyen d'autocollants, de tampographie ou de sérigraphie est prévue.

Nous proposons également deux couleurs exclusives avec une finition texturée, la couleur Corten et le gris micaceo.

Différents traitements et personnalisations sont disponibles sur demande, notamment le thermolaquage avec des couleurs non standard, avec des finitions lisses mates et brillantes, ou encore la peinture anti-graffiti.

ACERO PINTADO / ALUMINIO PINTADO

Para cada uno de nuestros productos y componentes en acero, elegimos la materia prima y los tratamientos más idóneos en función de nuestro ciclo productivo y de las exigencias de cada uno de los diseños.

Nuestros tratamientos para el acero son: la galvanización en caliente y en frío, la galvanización Sendzimir, la cataforesis y el tratamiento "primer". Para nuestros productos y componentes en aluminio, utilizamos láminas de aluminio, aluminio extruido o fundido.

Posteriormente, se recubre el acero, el acero inoxidable y el aluminio con pintura en polvo de poliéster, de acuerdo con lo dispuesto en la norma EN ISO 12944-2.

Ofrecemos una amplia gama de colores RAL estándar con acabado irregular y con diferentes niveles de gofrado, mientras que, solo donde se requiera la personalización con adhesivos, tampografía o serigrafía, por motivos técnicos, el acabado será liso (mate o brillante) según la viabilidad técnica.

También disponemos de dos colores exclusivos con acabado irregular: color corten y gris "micaceo".

Bajo solicitud, disponemos de diferentes tratamientos y personalizaciones, incluyendo pinturas con colores no estándar, y/o con acabados lisos ya sea mate o brillante, y/o pintura anti-graffiti.

1.

Aspetto/tonalità del manufatto ossidato al momento della consegna (circa 2 mesi di ossidazione).

Appearance/shades of oxidized product at the time of delivery (approximately 2 months of oxidation).

Aspect/teinte du produit en corten oxydé au moment de la livraison (environ 2 mois d'oxydation).

Aspecto/Tonalidad del acero corten en el momento de la entrega (aproximadamente 2 meses de oxidación).

2.

Aspetto/tonalità del manufatto ossidato dopo circa 4/6 mesi dall'installazione.

Appearance/shades of oxidized product after approximately 4/6 months from its installation.

Aspect/teinte du produit en corten oxydé, 4/6 environ après la date d'installation.

Aspecto/Tonalidad del acero corten después de 4/6 meses desde la instalación.

3.

Aspetto/tonalità del manufatto al termine del periodo di ossidazione dopo circa 12/18 mesi dall'installazione.

Appearance/shades of the product at the end of the period of oxidation after about 12/18 months of installation.

Aspect/teinte du produit en corten oxydé, 12/18 mois environ après la date d'installation.

Aspecto/Tonalidad del acero corten después de 12/18 meses desde la instalación.

4.

Acciaio corten con speciale trattamento "Antidilavamento"

Corten steel with "Anti-washout" special treatment

Aspect/teinte du produit en corten oxydé avec le traitement "Anti-délavement".

Acero Corten con tratamiento especial "Antideslavamiento".

La riproduzione delle tonalità riportate su carta sono puramente indicative. Richiedere le piastrine campione.

The reproduction of the shades shown on paper is only indicative. Upon request, platelet samples can be provided.

Le reproduction des teintes sur le papier est infidèle et purement indicative, en cas de doute ou d'exigences particulières, demander une plaque d'échantillon.

La reproducción de las tonalidades sobre papel son orientativas. Pueden solicitar muestras.

● CARATTERISTICHE E CICLO DI MATURAZIONE DEL CORTEN

L'acciaio corten, grazie al processo di maturazione / ossidazione che lo caratterizza, è considerato un materiale "vivo", che può variare nel tempo, in tonalità e sfumature, a seconda della forma dell'oggetto, della posizione in cui viene installato e in funzione delle condizioni atmosferiche cui è sottoposto.

Per attivare la maturazione dell'acciaio corten, City Design utilizza un sistema di ossidazione tramite agenti atmosferici. Tale sistema conferisce al corten un particolare aspetto non uniforme e diverse sfumature di colore, particolarmente più visibili nelle zone delle saldature poiché la formazione della patina in questi punti è più lenta.

Le sfumature di colore, dunque, non sono un difetto.

Il periodo medio in cui il ciclo di maturazione del corten si "stabilizza", donando al materiale una tonalità "testa di moro" tipica del corten ossidato, è di circa 12/18 mesi in presenza di condizioni atmosferiche adeguate. Durante la fase di maturazione, il corten può rilasciare perdite di ossido ("diluavamento"), che potrebbero macchiare le superfici ove i manufatti in corten sono posizionati: ciò è da considerarsi naturale e fisiologico del comportamento del materiale.

Per ridurre le perdite di ossido, City Design ha messo appunto uno speciale trattamento "ANTIDILAVAMENTO", che può essere richiesto dal cliente, dietro sovrapprezzo: tale trattamento non blocca completamente le perdite, tuttavia le diminuisce sensibilmente, oltre a conferire al manufatto un aspetto più scuro e "rifinito".

● FEATURES AND CYCLE OF AGING CORTEN STEEL

Corten steel, thanks to the process of maturation/oxidation that characterizes it, is considered a "living" material, which may vary over time, in shades and tones, depending on the shape of the object, the position in which it is installed and according to the cycles of weathering which the object undergoes.

In order to initiate corten steel maturation process, City Design uses an oxidation process through weathering. This type of system lends to corten a specific non-uniform aspect and different shades of color are particularly visible in welding areas depending on the fact that in such areas patina process is slower.

Shades of colors, indeed, are not a defect.

The average period of "stabilization" of corten maturation process, giving to the material a "testa di moro" ("brown") color typical of the oxidized corten, is approximately 12/18 months with adequate weathering. During maturation process, corten may leak oxide ("wash-out"), which may stain surfaces where products are located: this shall be considered natural and physiological behavior of the material.

To reduce wash-out above, City Design has developed a specific treatment "ANTI-WASHOUT" the client may request, an extra-cost will be applied: this treatment does not completely stop the losses, but they will be significantly decreased, and will provide to the product a darker and "refinished" aspect.

● CARACTERISTIQUES ET CYCLE DE MATURATION DU CORTEN

L'acier corten, grâce à son processus de maturation/oxydation qui le caractérise, est considéré comme un matériau "vivant", qui peut varier dans le temps, en aspect et teinte, dépendant de la forme de l'objet, du lieu d'exposition, et des conditions climatiques.

City Design active la maturation de l'acier corten en utilisant un système d'oxydation grâce aux conditions climatiques. Ce système donne à l'acier corten de City Design un aspect non uniforme et différentes variations de couleurs. Les nuances de couleurs sont plus particulièrement visibles sur les zones des soudures, puisque la formation de la patine sur ces points est plus lente. Les nuances de teinte ne peuvent donc pas être considérées comme des défauts.

La durée moyenne de "stabilisation" du cycle de maturation du corten, donnant au matériau une nuance "brune foncée" typique du corten oxydé, est d'environ 12/18 mois dans le cas de conditions climatiques favorables. Durant le phase de maturation, le corten peut relâcher des oxydes ("délavement") pouvant tâcher la zone attenante au mobilier. Ceci est considéré comme naturel et correspond à un comportement physiologique normal du corten. Pour réduire les coulures d'oxyde, City Design utilise un traitement "ANTI-DÉLAVEMENT" qui peut être demandé par le client, avec un supplément de prix. Ce traitement ne bloque pas complètement les pertes, mais réduit de manière significative les coulures, et donne au produit une apparence plus sombre et "finie".

● CARACTERÍSTICAS Y CICLO DE MADURACIÓN DEL ACERO CORTEN

El acero corten, gracias al proceso de maduración/oxidación que lo caracteriza, es considerado un material "vivo", que puede variar en el tiempo, en tonalidad y matices, según la forma del elemento, la ubicación en el cual es instalado y en función de las condiciones climáticas a las cuales es sometido.

City Design, para activar la maduración del acero corten, utiliza un sistema de oxidación para agentes atmosféricos, favoreciendo así técnicas no invasivas para el medio ambiente. Este sistema natural, da al acero corten de City Design un particular aspecto no uniforme y diferentes tonos de color. En particular, los matices de color típico del acero corten son más visibles en las zonas de las soldaduras ya que la formación de la pátina en estos puntos es más lenta.

Los tonos de color, por lo tanto, no son un defecto.

El período medio tras el cual el ciclo de la maduración del corten se "estabiliza", dando al material la tonalidad "cabeza de moro" típica del acero corten oxidado, es sobre unos 12/18 meses, en condiciones atmosféricas apropiadas. Durante esta fase de maduración, el corten puede tener pérdidas de óxido ("deslavamiento"), que pueden manchar las superficies donde los productos están ubicados: se trata de un comportamiento natural y fisiológico del material.

Para reducir las pérdidas de óxido, City Design a puesto a punto un tratamiento especial llamado "ANTI-DESLAVAMIENTO", que puede ser solicitado por el cliente, con un coste adicional: este tratamiento no bloquea completamente las pérdidas, pero las disminuye significativamente, además de dar el producto un aspecto más oscuro y "acabado".

● ACCIAIO INOX

Per i nostri prodotti e componenti in acciaio Inox di norma utilizziamo acciaio AISI 304 o 304L, in caso di condizioni di posizionamento particolarmente aggressive raccomandiamo di richiedere AISI 316.

Di norma il nostro acciaio Inox è satinato o pallinato a seconda delle caratteristiche tecniche del manufatto.

È anche disponibile su richiesta il trattamento di elettrolucidatura.

● STAINLESS STEEL

For our stainless steel products and components, we normally use AISI 304 or 304L stainless steel, but in case of installation in highly aggressive conditions we recommend requesting AISI 316 stainless steel.

Our stainless steel is usually brushed or shotblasted, depending on the technical features of the product.

Electropolishing treatment is also available, upon request.

● ACIER INOXYDABLE

Pour nos produits et composants en acier Inox, nous utilisons normalement l'acier AISI 304 ou 304L: en cas d'utilisation dans un environnement particulièrement agressif, nous recommandons l'acier AISI 316.

Généralement, notre acier Inox est satiné ou grenailé selon les caractéristiques techniques du produit.

Un traitement d'électropolissage est également disponible sur demande.

● ACERO INOXIDABLE

Para nuestros productos y componentes en acero inoxidable, normalmente utilizamos acero AISI 304 o 304L. Sin embargo, aconsejamos, en el caso de que los productos vayan posicionados en lugares particularmente agresivos, de solicitar el acero AISI 316.

Por regla general, nuestro acero inoxidable es satinado o granallado, según las características técnicas del producto.

El tratamiento de electro-pulido está disponible previa solicitud.

● WPC

City Design utilizza, su alcuni prodotti, “legno composito”, altresì noto come WPC (dall’inglese “Wood Plastics Composite”). Si tratta di un materiale costituito da elementi vegetali, come fibre o farine di legno, e materiale termoplastico.

City Design si riserva di scegliere la tipologia di WPC più adatta alle esigenze di progetto e/o prodotto.

● WPC

City Design uses WPC (Wood Plastics Composite) on some products. This is a material consisting of vegetable elements, such as fibres or wood flour, and thermoplastic material.

City Design reserves the right to choose the type of WPC best suited to the project and/or product requirements.

● WPC

City Design utilise du “bois composite”, également connu sous le nom de WPC (de l’anglais “Wood Plastics Composite”), sur certains produits. Il s’agit d’un matériau composé d’éléments végétaux, tels que des fibres ou de la farine de bois, et d’un matériau thermoplastique.

City Design se réserve le droit de choisir le type de WPC le mieux adapté aux exigences du projet et/ou du produit.

● WPC

City Design utiliza la “madera compuesta”, también conocida con el nombre WPC (Wood Plastics Composite) para algunos productos. Es un material compuesto por elementos vegetales, como fibras o harina de madera, y material termoplástico.

City Design se reserva el derecho de elegir el tipo de WPC que mejor se adapte al proyecto y/o a los requisitos del producto.

● LEGNO

City Design ha selezionato due categorie di legni per i propri prodotti:

LEGNO DURO (Iroko, Movingui o similari)

Il legno duro viene fornito con trattamento di finitura pigmentato a base d'acqua, ma è possibile richiedere che il legno venga fornito senza trattamento di finitura. Su richiesta, il legno duro, è disponibile anche con certificazione FSC. City Design si riserva di selezionare di volta in volta i legni duri più adatti alle esigenze di prodotto e/o progetto e/o secondo le disponibilità del mercato.

LEGNO TERMO-TRATTATO

Il legno di pino viene sottoposto al trattamento termico, ottenendo così un materiale con un ciclo di vita più lungo, maggiore resistenza agli agenti atmosferici ed alla decomposizione, maggiore solidità e stabilità dimensionale. Su richiesta può essere fornito con trattamento di finitura pigmentato a base d'acqua. Su richiesta, il legno è disponibile anche con certificazione FSC o PEFC.

N.B Il legno è un materiale naturale e, in quanto tale, è fisiologico che vari aspetto nel tempo soprattutto grazie a:

- una naturale tendenza all'ingrigimento, più o meno marcata e/o rapida a seconda della tipologia di legno e/o delle caratteristiche ambientali del luogo d'installazione del prodotto.
- una naturale tendenza a manifestare fessurazioni e crepe a causa di variazioni di volume dettate dalle variazioni climatiche/ambientali del luogo di installazione.
- la presenza di nodi più o meno grandi sul legno di pino termo-trattato

Tali comportamenti sono dunque da considerarsi tipici e non costituiscono difetto nel prodotto. Si ricorda però che una adeguata e frequente manutenzione degli elementi in legno, in base alla tipologia di legno scelta e alle condizioni ambientali del luogo di installazione, aiuta a preservarne la qualità e la durata, rallentando il fisiologico processo di invecchiamento del materiale.

● WOOD

City Design has selected two categories of wood for its products:

HARDWOOD (Iroko, Movingui or similar)

Hardwood is supplied with a water-based pigmented finish treatment. Upon request the wood can be supplied without a finish treatment. Upon request, hardwood is also available with FSC certification. City Design reserves the right to select from time to time the hardwoods most suitable for the product and/or project requirements and/or according to market availability.

THERMO-TREATED WOOD

Pine wood is subjected to heat treatment, resulting in a material with a longer life cycle, greater resistance to weathering and decay, greater strength and stability. Upon request, it can be supplied with a water-based pigmented finish treatment. On request, is also available with FSC or PEFC certification.

P.N. Wood is a natural material and, as such, it is physiological that its appearance changes over time mainly due to:

- a natural inclination to greying more or less marked and/or rapid depending on the type of wood and/or the environmental characteristics of the place where the product is installed.
- a natural tendency to show cracks and fissures due to volume changes caused by climatic/environmental variations at the installation site.
- the presence of more or less large knots on thermo-treated pine wood.

These characteristics are therefore to be considered typical and do not constitute a defect in the product. However, it should be remembered that proper and frequent maintenance of wooden elements, depending on the type of wood chosen and the environmental conditions of the place of installation, helps to preserve their quality and durability, slowing down the physiological ageing process of the material.

BOIS

City Design a sélectionné deux catégories de bois pour ses produits :

BOIS DUR (Iroko, Movingui ou similaire)

Le bois dur est fourni avec un traitement de finition pigmenté à base d'eau, mais il est possible de demander que le bois soit fourni sans traitement de finition. Sur demande, le bois dur est également disponible avec la certification FSC. City Design se réserve le droit de sélectionner de temps à autre les bois durs les mieux adaptés aux exigences du produit et/ou du projet et/ou en fonction de la disponibilité du marché.

BOIS THERMO-TRAITÉ

Le bois de pin subit un traitement thermique, ce qui permet d'obtenir un matériau ayant un cycle de vie plus long, une plus grande résistance aux intempéries et à la décomposition, une plus grande solidité et une meilleure stabilité dimensionnelle. Sur demande, il peut être fourni avec un traitement de finition pigmenté à base d'eau. Sur demande, le bois tendre est également disponible avec la certification FSC ou PEFC.

N.B. Le bois est un matériau naturel et, en tant que tel, il est physiologique qu'il varie d'aspect dans le temps, principalement en raison de :

- une tendance naturelle au grisaillement, plus ou moins marqué et/ou rapide en fonction du type de bois et/ou des caractéristiques environnementales du lieu où le produit est installé
- tendance naturelle à présenter des fissures et des craquelures dues à des variations de volume dictées par les variations climatiques/environnementales du lieu d'installation.
- la présence de nœuds plus ou moins gros sur le bois de pin thermo-traité.

Ces comportements doivent donc être considérés comme typiques et ne constituent pas un défaut du produit. Toutefois, il convient de rappeler qu'un entretien adéquat et fréquent des éléments en bois, en fonction du type de bois choisi et des conditions environnementales du lieu d'installation, contribue à préserver leur qualité et leur durabilité, en ralentissant le processus de vieillissement physiologique du matériau.

MADERA

City Design ha seleccionado dos categorías de madera para sus productos:

MADERA DURA (Iroko, Movingui o similar)

La madera dura se suministra con un tratamiento de acabado pigmentado a base de agua, pero es posible solicitar que la madera se suministre sin tratamiento de acabado. Bajo pedido, la madera dura también está disponible con certificación FSC. City Design se reserva el derecho de seleccionar de vez en cuando las maderas frondosas más adecuadas para los requisitos del producto y/o proyecto y/o según la disponibilidad del mercado.

MADERA TRATADA TÉRMICAMENTE

La madera de pino se somete a un tratamiento térmico, lo que da como resultado un material con un ciclo de vida más largo, mayor resistencia a la intemperie y al deterioro, mayor resistencia y estabilidad dimensional. Bajo pedido, puede suministrarse con un tratamiento de acabado pigmentado a base de agua. Bajo pedido, la madera también está disponible con certificación FSC o PEFC.

N.B. La madera es un material natural y, como tal, es fisiológico que varíe de aspecto con el tiempo debido principalmente a:

- una tendencia natural a agrisarse, más o menos marcada y/o rápida en función del tipo de madera y/o de las características ambientales del lugar de instalación del producto.
- una tendencia natural a manifestar grietas y fisuras debido a los cambios de volumen dictados por las variaciones climáticas/ambientales en el lugar de instalación.
- la presencia de nudos más o menos grandes en la madera de pino tratada térmicamente.

Por lo tanto, estos comportamientos deben considerarse típicos y no constituyen un defecto del producto. No obstante, conviene recordar que un mantenimiento adecuado y frecuente de los elementos de madera, en función del tipo de madera elegido y de las condiciones ambientales del lugar de instalación, contribuye a preservar su calidad y durabilidad, ralentizando el proceso de envejecimiento fisiológico del material.

● **HPC**

Il nostro HPC (High Performance Concrete) è disponibile in tre colorazioni, bianco, grigio e grigio scuro, e fornito con finitura liscio naturale. Caratterizzato da aspetto materico, l'HPC può presentare bolle, effetti nuvolati di colore non uniforme e leggere cavillature, aspetti fisiologici di queste tipologie di materiale. I prodotti finiti poi sono trattati con una vernice protettiva e, su richiesta, è possibile applicare il trattamento antigraffiti.

● **HPC**

Notre HPC (High Performance Concrete) est disponible en trois couleurs, blanc, gris et gris foncé, et est fourni avec une finition lisse naturelle. Caractérisé par son aspect matériel, l'HPC peut présenter des bulles, des effets nuageux de couleur non uniforme et de légères craquelures, aspects physiologiques de ce type de matériau. Les produits finis sont ensuite traités avec un vernis de protection et, sur demande, un traitement anti-graffiti peut être appliqué.

● **HPC**

Our HPC (High Performance Concrete) is available in three different colors, white, grey, and dark grey, and supplied with a natural smooth finish. Characterized by material appearance, HPC can present bubbles, not uniform cloudy effects of color and hairline cracks, which are physiological aspects of this material. Upon request, when technically feasible, it is possible to perform polishing operations. The finished products are then treated with a protective varnish and, upon request, an anti-graffiti treatment can be applied.

● **HPC**

Nuestro HPC (High Performance Concrete) está disponible en tres colores, blanco, gris y gris oscuro y el acabado es liso natural. Caracterizado por su aspecto material, el HPC puede presentar burbujas, un color que no es uniforme, así como ligeras grietas, en ambos casos se trata de aspectos fisiológicos de este tipo de material. Los productos acabados se tratan con un barniz protector y, si se solicita, se puede aplicar un tratamiento antigraffiti.

● HPL

L'HPL (High Pressure Laminate), materiale particolarmente adatto all'outdoor, che abbiamo selezionato per i nostri prodotti, è disponibile in due colorazioni a scelta: bianco e nero.

● HPL

L'HPL (High Pressure Laminate), materiale particolarmente adatto all'outdoor, che abbiamo selezionato per i nostri prodotti, è disponibile in due colorazioni a scelta: bianco e nero.

● HPL

Le HPL (High Pressure Laminate), matériau particulièrement adapté à un usage extérieur, a été sélectionné pour nos produits, et il est disponible en un des deux couleurs suivants: blanc et noir.

● HPL

Le HPL (High Pressure Laminate), matériau particulièrement adapté à un usage extérieur, a été sélectionné pour nos produits, et il est disponible en un des deux couleurs suivants: blanc et noir.
